

YOUR NO. 1 GUIDE TO JOBS & BUSINESS NEWS

JobZone

Vol. 1 No 3

www.jobzonenews.com.ng

ISSN
23846577

Thank you for reading JobZone Newspaper

You'll love the contents in this edition. I want you to take particular interest in the Artificial Intelligence and Block Chain technologies and do your best to take position immediately.

You can get yourself subscribed to our Resources Vault of these new trends. You will be glad you did if you subscribe now at the bargain price we offer in this edition.

If you're a Christian author, you can also claim a free invitation to be part of the Christian Author Initiative.

I'm wishing you all the best.

Robots Are Taking Over Our World!

How To Cash In On These New Trends

LEARNING AI AND BLOCK CHAINS

When the internet started to become popular in those days, the wise ones took positions immediately. Today it has made many millionaires and billionaires. Now you need to put on your thinking and action caps to see and act on the new emerging billionaire-making trends in our world.

There are two major trends you can't miss in the world of tech today. The first is that of Artificial Intelligence (AI) techniques. If you have not heard about this, you should know that Robots are actually taken over our world already.

Artificial intelligence (AI) is an area of computer science that emphasizes the creation of intelligent machines that work and reacts like humans. Some of the activities computers with artificial intelligence are designed for include: Knowledge, Reasoning, Problem solving, Perception, Learning, Planning, Ability to manipulate and move objects.

AI has brought about a realization in the commercial industry that you can, with modern computing resources, teach a computer to perform complex tasks just as well as, or potentially better than, human experts. Companies with these resources are already using AI to improve their efficiency and increase profits: Google, Amazon, Facebook, Abibaba, etc.

Google is just one pioneer of this type of corporate model, and that every major organization is either using AI today or will be doing it very soon. If they don't, they may be in danger of going out of business.

Knowledge Engineering, Machine Learning, and Robotics are core parts of AI research.

The second trend is the emergence of advanced cryptographic tools and distributed ledgers, commonly known by the term Block Chain or distributed ledger technology. This was popularized by Bitcoin. Block chains are currently being hailed by some as the future facilitators of radically different societal systems of trust, identity and economic exchange.

With a Block Chain, many people can write entries into a record of information, and a community of users can control how the record of information is amended and updated. Likewise, Wikipedia entries are not the product of a single publisher. No one person controls the information. However, the block chain technology, though similar is uniquely different if we dig deeper.

These two technologies are already here to stay with us and into the future. You'll need to find a way to position yourself immediately to cash in on these trends as many more countries and organizations are switching their attention to them already.

Become an expert in these technologies. Get trained to build block chains. The guys who learnt the use of the internet, website designing and programming of different kinds massively reaped the profits of their actions. It's time for you to act now.JZ

ARTIFICIAL INTELLIGENCE (AI) DISSECTED FURTHER

Artificial intelligence is one of the fastest-growing fields in tech, but with so much to know about it, where does one start? Here we take a look at some ways to familiarize yourself with AI.

Artificial intelligence is already here and it's near you. Soon it will likely start performing many of the tasks that humans perform.

You don't need to see it as a threat, instead, it's better to learn the fundamentals of AI now so that when it does arrive it can be used as a tool to enhance the value of human effort to your organization or to any organisation you consult for.

You should know that there are many different types of AI that serve various functions. Tech journalist Michael Copeland views the technology as a series of concentric circles, with AI as the outermost circle and more specialized forms like machine learning (ML) and deep learning falling within. The differences lie in the levels of complexity exhibited by each form of AI and the specific functions they are designed to enable.

Machine learning uses algorithms to parse data to make predictions about its environment. With ML, programmers no longer need to hand code each and every action a system should take, but rather the

system itself can determine the best course of action given the available data. Even at this stage, however, the term “intelligence” is used very loosely, since it still requires a lot of human input for ML to arrive at rational conclusions.

This is where deep learning and neural networks come in. Unlike machine learning, these technologies seek to emulate the workings of the human brain. Using advanced layering, connectivity and data propagation, they process data sets in numerous ways to produce weighted probabilities for a given result. Since this is a very heavy computation workload, it isn't surprising that this level of AI was kept on the back burner until GPUs and parallel processing entered the mainstream.

The AI programmer should also become familiar with the leading platforms on the market. While the plethora of solutions is growing larger by the day, some of the more basic systems offer a fairly easy learning curve for those who are already familiar with common programming languages

The biggest change that artificial intelligence will bring to the knowledge workforce, and IT in particular, is the removal of all of the rote, repetitive tasks that make up the bulk of the workday. But make no mistake, AI will not make humans redundant, nor will it allow mankind to live a life of leisure while machines do all the work.

Christian Author Initiative

MAXIMIZE YOUR POTENTIAL AS AN AUTHOR. MAKE MORE IMPACT WITH YOUR BOOK MINISTRY

See Some Benefits To You Below:

1. You will learn the basics of writing good books that catches the attention of readers.
2. You will learn how to use styles in your writings to pass across your message in a simple way.

3. You'll learn how to leverage the internet and technology to publish books, publish books in other formats like videos, video courses, and podcast.
4. You'll learn how to leverage the internet and technology to distribute and sell more books.
5. You'll learn how to start book-distributing platforms that will both help you to spread the gospel of Jesus Christ, the message that God gives you and also make money from your writings.
6. How to use the platforms of books and information products to improve your brand and publicize your ministry or organization's activities.
7. You'll learn how to set up and run an efficient Author's website.
8. You'll learn how set up and run an efficient e-newsletter.
9. You'll not only write good books and information products, you'll also have the opportunity to improve your Christian spirituality.
10. You'll be subscribed to our Book profit Reports Vaults where we have lots of useful books, videos and information products domiciled. We update this regularly.

Registration Procedure

1. Send your 'Name+ email + CAI' to 07066360364
2. If you don't have an email, send only your name.

Improve Your Earning Power

By Learning Artificial Intelligence and Block Chain Technologies

Some of the Over 20 Ebooks, Videos and Video Courses Are:

1. Artificial Intelligence Illuminated.
2. Artificial Intelligence for Games.
3. International Dictionary of Artificial Intelligence.
4. Artificial Intelligence and Soft Computing.
5. Introduction to Artificial Intelligence.
6. What Is Block Chain?
7. Block Chain Technology Principles and Applications.
8. Block Chain Technology. The Promise of Bitcoin and Block Chain.
9. Introduction to machine Learning.
10. Machine Learning For Computer Vision
